Duration	2 mins 20 secs
Grade	**15.00** out of 15.00 (**100**%)

Question **1**

Correct

Mark 1.00 out of 1.00

In linear search, how is the element searched?

a. By using a hash function
b. By comparing each element in the list sequentially ✓
c. By dividing the list into halves
d. By sorting the list first

Question **2**

Correct

Mark 1.00 out of 1.00

Which of the following statements about linear search is true?

a. Linear search divides the list into halves.
b. Linear search requires the list to be sorted.
c. Linear search can be applied to both sorted and unsorted lists. ✓
d. Linear search is more efficient than binary search on large lists.

Question **3**

Correct

Mark 1.00 out of 1.00

If the target element is greater than the middle element in binary search, where does the search continue?

a. At the beginning of the list
b. In the middle of the list
c. In the left sublist
d. In the right sublist ✓

Question **4**

Correct

Mark 1.00 out of 1.00

Finding the location of a given item in a collection of items is called

a. Mining
b. Discovering
c. Searching ✓
d. Finding

Question **5**

Correct

Mark 1.00 out of 1.00

Which method of searching involves sequentially comparing each element until a match is found?

a. Linear search ✓
b. Jump search
c. Hashing
d. Binary search

Question **6**

Correct

Mark 1.00 out of 1.00

In which type of search is the list divided into smaller sublists during the search process?

a. Hash search
b. Sequential search
c. Binary search ✓
d. Linear search

Question **7**

Correct

Mark 1.00 out of 1.00

_____sort is the simplest sorting algorithm that works by repeatedly swapping the adjacent elements in case they are unordered in n-1 passes.

a. Bubble ✓

b. Insertion

c. Selection

d. Complexity

Question **8**

Correct

Mark 1.00 out of 1.00

In which situation is linear search more efficient than binary search?

a. When the list is large and sorted

b. When the list is small and unsorted ✓

c. When the list is small and sorted

d. When the list is large and unsorted

Question **9**

Correct

Mark 1.00 out of 1.00

In binary search, what happens if the middle element does not match the target element?

a. The list is sorted

b. The search continues in the left or right sublist ✓

c. The search continues from the beginning

d. The search stops

Question **10**

Correct

Mark 1.00 out of 1.00

What type of search would be most appropriate for finding an element in a list that is frequently updated?

a. Hash search
b. Linear search ✓
c. Binary search
d. Interpolation search

Question **11**

Correct

Mark 1.00 out of 1.00

What is the advantage of binary search over linear search?

a. Binary search works on unsorted lists
b. Binary search has a lower time complexity on large, sorted lists ✓
c. Binary search does not require dividing the list
d. Binary search can find multiple instances of the target element

Question **12**

Correct

Mark 1.00 out of 1.00

The average case occurs in the linear search algorithm

a. When the item is not the array at all
b. When the item is somewhere in the middle of the array ✓
c. When the item is the last element in the array
d. Item is the last element in the array or item is not there at all

Question **13**

Correct

Mark 1.00 out of 1.00

What is the key characteristic of binary search?

a. It compares elements sequentially
b. It always starts from the beginning of the list
c. It works on unsorted lists
d. It can be applied only if the list is sorted ✓

Question **14**

Correct

Mark 1.00 out of 1.00

Which of the following is not the required condition for a binary search algorithm?

a. There should be direct access to the middle element in any sublist

b. The list must be sorted

c. There must be a mechanism to delete and/or insert elements in the list ✓

d. Number values should only be present

Number values should only be present

Question **15**

Correct

Mark 1.00 out of 1.00

In the context of searching, what is a successful search?

a. When the element is found in the list ✓

b. When the search algorithm finishes

c. When the list is sorted

d. When the list contains duplicate elements
